

1. Create a table listing 3 types of printers, 2 types of scanners, and 2 types of webcams, and for each, write one real-life use case

Device Category	Specific Type	Real-Life Use Case
Printers	Inkjet Printer	Photo Printing: Producing vibrant, high-quality family photographs and creative art projects on specialized glossy photo paper.
	Laser Printer	High-Volume Office Docs: Printing hundreds of sharp, text-heavy reports or legal contracts quickly and cost-effectively.
	Thermal Printer	Retail & Logistics: Printing receipts at point-of-sale systems or shipping labels on heat-sensitive paper without needing ink.
Scanners	Flatbed Scanner	Archiving Documents & Photos: Digitizing fragile physical documents, old family photos, or thick book pages on a glass pane.
	Sheet-fed Document Scanner	Bulk Business Paperwork: Quickly scanning a stack of loose tax forms or multi-page invoices using an automatic document feeder.
Webcams	HD Conference Webcam	Remote Work / Telemedicine: Participating in daily virtual meetings, Zoom calls, or remote doctor appointments with crisp, True HD quality.
	4K Streaming Webcam	Content Creation: Live streaming games on Twitch or recording vlogs for YouTube with studio-grade lighting and smart autofocus.

2. Draw a labeled diagram showing how a typical home printer connects to a laptop or PC, including the connection interface used

3. List three different connection interfaces (such as USB, Wi-Fi, Bluetooth) used by peripherals like printers, scanners, and webcams, and for each, name one advantage and one disadvantage.

1. USB (Universal Serial Bus)

- **Advantage:** Delivers reliable, high-speed data transfer alongside physical power through a single wire. It features true "plug-and-play" simplicity without requiring network configuration.

- **Disadvantage:** Restricts peripheral placement due to cable length limitations

2. Wi-Fi (Wireless Local Area Network)

- **Advantage:** Allows peripherals to be placed anywhere within router range, enabling multiple computers to seamlessly share a single device like an office printer or scanner
- **Disadvantage:** Vulnerable to radio frequency (RF) interference and signal drops, which can delay large print jobs or stall streaming webcams.

3. Bluetooth

- **Advantage:** Consumes very little power and facilitates easy wireless pairing for short-range, point-to-point connections.
- **Disadvantage:** Features significantly lower bandwidth and a shorter usable range (usually under 10 meters). This can cause noticeable latency in real-time streaming webcams or delays in large document transfers.

4. **Pick any one device you use at home or college (printer, scanner, or webcam). Write step-by-step instructions for how you would connect it to your computer, including what cable or wireless method you would use and any setup steps required.**

How to Connect a Wireless Printer via Wi-Fi

Phase 1: Preparing the Printer

- Before connecting it to your computer, the printer needs to be on and connected to your local network.
1. **Unbox and Power On:** Plug the printer's power cable into a wall outlet and press the power button.
 2. **Install Ink and Paper:** Open the appropriate compartments to insert the ink or toner cartridges and load a stack of paper into the tray.
 3. **Connect to Wi-Fi:** Navigate to the printer's built-in digital screen
 - Go to Settings > Network or Wireless Setup Wizard.
 - Select your home or college Wi-Fi network from the list.
 - Enter your Wi-Fi password using the printer's keypad or touchscreen.
 - Wait for the confirmation that the printer is successfully connected to the network.

Phase 2: Adding the Printer to Your Computer

Once the printer is on the network, your computer needs to find it. Make sure your computer is connected to the exact same Wi-Fi network as the printer.

For Windows Users:

1. Click the Start button and open Settings (the gear icon).
2. Navigate to Bluetooth & devices > Printers & scanners.
3. Click the Add device button.
4. Windows will scan your network. When your printer's name appears on the list, click Add device next to it.
5. Wait for Windows to automatically download and install the necessary drivers.

Phase 3: The Final Test

1. Print a Test Page: Open a blank document, type a few words, and hit Ctrl + P (Windows) or Cmd + P (Mac).
2. Verify: Ensure your newly added printer is selected in the destination drop-down menu and click Print.

If the page prints successfully, your setup is complete!
